

Problem

The merged array should also be sorted in non-decreasing order. Complete the function `mergeSortedArrays` that takes the following parameters:

- `arr1[n]`: the first sorted array
- `arr2[m]`: the second sorted array

Returns `int[]`: the merged sorted array

Input Format

The first line contains an integer n , the size of the first array. The second line contains n space-separated integers representing the first sorted array. The third line contains an integer m , the size of the second array. The fourth line contains m space-separated integers representing the second sorted array.

Constraints

$1 \leq n, m \leq 10^5$ $-10^9 \leq arr1[i], arr2[i] \leq 10^9$ Both arrays are sorted in non-decreasing order.

Output Format

Print the merged sorted array as space-separated integers.

Sample Input 0

```
4
1 3 5 7
4
2 4 6 8
```

Sample Output 0

```
1 2 3 4 5 6 7 8
```

Language

Python 3

```
1 # Enter your code here. Read input from STDIN. Print output to STDOUT
2 n = int(input())
3 arr1 = list(map(int, input().split()))
4 m = int(input())
5 arr2 = list(map(int, input().split()))
6 merged = sorted(arr1 + arr2)
7 print(*merged)
```

Line: 7 Col: 17
