

Problem

Given an integer array of size n , find the majority element.

A majority element is an element that appears more than $\lfloor n/2 \rfloor$ times.

If a majority element exists, print it. Otherwise, print -1.

Submissions

Complete the function `majorityElement` that takes the following parameter:

- `int arr[n]`: an array of integers

Returns `int`: the majority element if it exists; otherwise -1.

Leaderboard

Input Format

The first line contains an integer n , the number of elements in the array. The second line contains n space-separated integers.

Discussions

Constraints

 $1 \leq n \leq 10^5$ $-10^9 \leq arr[i] \leq 10^9$

Output Format

Print the majority element if it exists; otherwise, print -1.
