Given a dictionary of words dict where each word follows CamelCase notation, print all words in the dictionary that match with a given pattern consisting of uppercase characters only. CamelCase is the practice of writing compound words or phrases such that each word or abbreviation begins with a capital letter. Common examples include: "PowerPoint" and "WikiPedia", "GeeksForGeeks", "CodeBlocks", etc.

NOTE:The order should be such that the output strings should be sorted by the lexicographic order of their abbreviations. For strings with same abbreviations the strings should be sorted by the usual lexicographic order. So, if Output Strings are Hi and HelloWorld, Hi should come first as H lexiographically is smaller than HW.

Input Format

n=8 dict[]=
{Hi,Hello,HelloWorld,HiTech,HiGeek,HiTechWorld,HiTechCity,HiTechCity,HiTechCity}

pattern = HA

Constraints

1 <= N <= 100 1 <= length of pattern <= length of string <= 100

Output Format

No match found

Sample Input 0

8
Hi,Hello,HelloWorld,HiTech,HiGeek,HiTechWorld,HiTechCity,HiTechCity,HiTechCity

Sample Output 0

No match found

Sample Input 1

3
WelcomeGeek>WelcomeToGeeksForGeeks,GeeksForGeeks,WelcomeToGeeksForGeeks

Sample Output 1

WelcomeToGeeksForGeeks

```
1 def abbreviation(word):
2     return ''.join(ch for ch in word if ch.isupper())
3
4
5 n = int(input())
6
7 dictionary = input().split(',')
8
9 pattern = input()
10
11 answer = []
12
13 for word in dictionary:
14     abbr = abbreviation(word)
15
16     if abbr.startswith(pattern):
17         answer.append((abbr, word))
18
19 answer.sort()
20
21 if not answer:
22     print("No match found")
23 else:
24     for abbr, word in answer:
25         print(word)
26
```
